

LCP

Model 6040

From the historic Regency chauffeuse or low fireside chair (1700–30), the **LCP** has retained the high backrest that shelters sitters from drafts and the low seat that allowed them to be at the level of the fire. The use of acrylic (PMMA) makes it possible to obtain through a single moulding a plate folded back on itself in a spiral. Its transparent colour asserts the minimal purity of the lines by revealing the technical elements of implementation..
